

# Chinmay Tayade

Founding Mobile Engineer — Android • Kotlin • Jetpack Compose • Kotlin Multiplatform

New Delhi, India | +91 7703875868 | chinmaytayade@outlook.com | linkedin.com/in/chinmaytayade | github.com/chinmay-tayade

## SUMMARY

Founding mobile engineer with 4+ years taking consumer fintech from an empty repository to millions of users. Sole Android engineer at Bachatt — architected and shipped the app end to end through public launch and a \$12M Series A, scaling to 5M+ downloads and 3M+ users. Deep Android / Kotlin / Jetpack Compose expertise with production Kotlin Multiplatform, offline-first architecture, and mobile security — full ownership from product spec to release, monitoring, and on-call.

## EXPERIENCE

### Founding Mobile Engineer

Mar 2025 – Present

*Bachatt (Trusave Fintech Pvt Ltd) — Gurugram, India*

*Consumer savings & wealth platform. Backed by Accel, Lightspeed, Info Edge Ventures.*

- Sole mobile engineer: built and own the Android app from an empty repository through public launch, seed round, and a \$12M Series A — now 5M+ downloads, 3M+ users, 4.6-star rating.
- Own the full mobile stack end to end: Kotlin, Jetpack Compose, multi-module Clean Architecture, MVVM/MVI, Coroutines/Flow, Hilt, Room — plus Play Console releases, Crashlytics monitoring, and production on-call.
- Introduced Kotlin Multiplatform into the live product: moved domain, data, and repository layers into a shared module across Android and iOS, cutting duplicated logic and feature delivery time by ~40%.
- Designed the offline-first architecture — local relational schema (SQLDelight) and sync engine (Ktor) — keeping the app fully usable on unreliable networks.
- Acted as de facto product manager: ran customer discovery with 100+ merchants, wrote the specs, and set the roadmap with no dedicated PM.
- Built CI/CD from scratch (GitHub Actions + Fastlane), held 85%+ automated test coverage, and hired and mentored the first engineers.

### Product Engineer, Android & iOS

Apr 2022 – Feb 2025

*Indepay (Setara Networks) — Gurugram, India*

*Enterprise payments network. Promoted from intern to full-time within 3 months.*

- Designed and built a cross-platform Payment SDK (Android + iOS) for a live network of 10,000+ merchants — improved transaction success rate by ~35%.
- Led a shared encryption library (Kotlin, Swift, Flutter): Keystore/Keychain-backed key handling, certificate pinning, OAuth 2.0 / JWT.
- Cut crash rate by ~60% and improved app performance by ~45% through systematic profiling and memory analysis; owned Firebase Crashlytics and Analytics.
- Optimised authentication (OAuth, biometric, JWT) and added WebSocket real-time updates, cutting transaction processing time by ~20%.

## TECHNICAL SKILLS

**Languages:** Kotlin, Java, Swift, Dart, Python, SQL

**Android:** Jetpack Compose, Coroutines, Flow, ViewModel, Room, DataStore, WorkManager, Navigation, Paging 3, Retrofit, OkHttp, Hilt/Dagger, Material 3

**Kotlin Multiplatform & iOS:** KMP/KMM, shared domain & data layer, Ktor, SQLDelight, Koin, Compose Multiplatform; Swift, SwiftUI, Swift Concurrency, SKIE

**Architecture:** Clean Architecture, MVVM, MVI, Unidirectional Data Flow, multi-module, offline-first, Repository pattern, SOLID, Dependency Injection

**Testing & CI/CD:** JUnit, MockK, Turbine, Espresso, Compose UI Test, MockWebServer, TDD; GitHub Actions, Fastlane, Gradle (convention plugins), Play Console releases

**Security:** Android Keystore, BiometricPrompt + CryptoObject, certificate/SSL pinning, OAuth 2.0, JWT, AES-GCM

**AI & CV:** on-device LLM inference, RAG / embeddings; YOLO, OpenCV, TensorFlow, PyTorch

## OPEN-SOURCE PROJECTS

All at [github.com/chinmay-tayade](https://github.com/chinmay-tayade) — original builds, each with tests and CI.

*Flagship builds*

- **argent-android** — multi-module Android banking app (Kotlin, Compose, Hilt, MVI). Currency-safe domain layer, an offline transfer state machine (idempotency keys, backoff + jitter, per-operation conflict resolution), biometric Keystore, certificate pinning, Baseline Profiles.

- **basis-kmp** — Kotlin Multiplatform investment tracker: one shared core (valuation, cost basis, allocation) across Android + iOS with native Compose and SwiftUI UIs. Ships `SHARING.md` — a module-by-module share-vs-native rationale; shared tests run on JVM and Kotlin/Native.
- **slate-ai** — on-device + cloud notes assistant. Pure-Kotlin RAG pipeline (sentence-aware chunking, embeddings, cosine retrieval) and a routing policy that keeps short lookups on-device and escalates to the cloud only when the task needs it.
- **modulith** — opinionated Android architecture template: Gradle convention plugins plus a `checkModuleGraph` task that fails the build on module-graph violations.

#### *Fintech libraries & modules*

- **ledger-core** — KMP double-entry ledger — balanced journal entries, idempotent postings, currency-safe Money. 12 tests, JVM + iOS.
- **pay-sheet** — Compose payment sheet — Luhn + card-brand detection, tokenization, a 3-D-Secure-style step-up state machine, PCI-conscious notes. 11 tests.
- **offline-sync-engine** — standalone sync library — durable operation queue, exponential backoff + full jitter, pluggable per-operation conflict strategies. 9 tests.

#### *Security, performance & craft*

- **mobile-security-notes** — Keystore AES-GCM, BiometricPrompt + CryptoObject, deny-by-shape log/PII redaction, certificate pinning — code plus a threat model and writeups.
- **android-perf-lab** — Baseline Profile + Macrobenchmark infrastructure with a methodology where every number carries its device, build type and iteration count.
- **compose-lab** — a custom Compose Layout with the wrapping maths unit-tested, and a recomposition study demonstrating `@Immutable` stability on screen.

#### *Earlier work*

- **Kryptografi** — native Swift RSA encryption library.
- **Iris Recognition** (deep learning, 98%+ accuracy) & **Number Plate Detection** (YOLO + OCR) — computer-vision projects at IIIT Allahabad.

## EDUCATION

### **B.Tech, Information Technology**

2018 – 2022

Indian Institute of Information Technology (IIIT) Allahabad • ANABIN H+ (equivalent to a German Bachelor) • course-work: Machine Learning, Computer Vision.

**Languages:** English (full professional), German (A2, in progress).    **Availability:** open to relocation; immediate.
